

How to Add an External Domain

From the **Home** page, click on your account and select **Domains**.

On the Domains Page, select the **External Domains Tab**. Next, enter the **Domain Name** in the box provided and click **Add**:

The screenshot shows the 'Domains' section of the Postalytics interface. At the top, there's a header 'Domains' with a key icon. Below it is a light blue informational box stating: 'Here you can register and manage multiple domains for use with the pURLs that track your audience online. Simply search for the right vanity domain and follow the prompts to purchase. If you want to use domains purchased elsewhere, you can add them here as external domains. Note - external domains require technical settings to be adjusted with their host registrar.' Below this, there are two tabs: 'Domains' and 'External Domains', with 'External Domains' being the active tab. On the left, under 'Domain Names', there's a list with one entry: '3rdcliff.com'. To the right, there's a form with a 'Domain Name' input field and an 'Add' button. Below the form is a table with three columns: 'Record Type', 'Hostname', and 'Value'.

You'll receive a message that your domain has been successfully added to your account.

In order to point a domain to Postalytics for a **pURL Campaign**, you'll need to add an **'A' Record** with a Host value of **'*'** to your domain registrar's DNS Zone File. This will point everything **except** subdomains that are already assigned to our IP address:

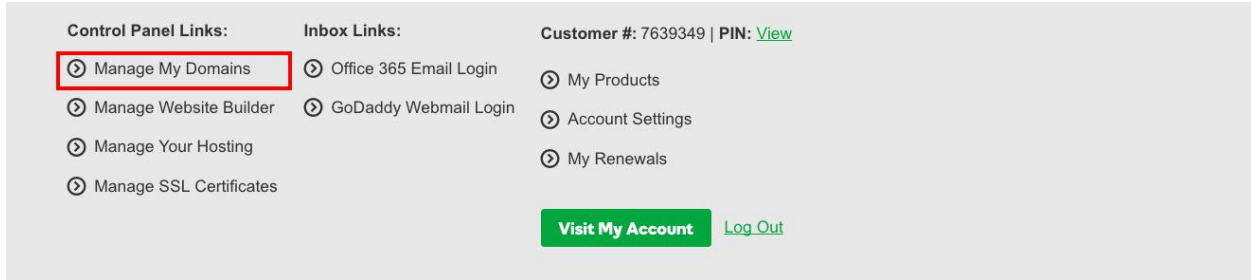

Log in to your hosting company's admin dashboard, navigate to your domain's DNS settings, and add an **'A' Record** with the following values.

- **Host:** *
- **Points to:** 18.205.118.100
- **TTL:** 1 Hour

Below you will be able to view what your **'A' Record** should look like when entered into the dashboards of some popular web hosts including Godaddy, Network Solutions, and Register.com. Note that the new and correct IP address for Postalytics is **"18.205.118.100"**.

Godaddy

- After logging into Godaddy, Click your User ID in the upper right corner.
- Next, click **Manage My Domains**:

Control Panel Links: **Manage My Domains** (highlighted), Manage Website Builder, Manage Your Hosting, Manage SSL Certificates

1 2

And then enter the following:

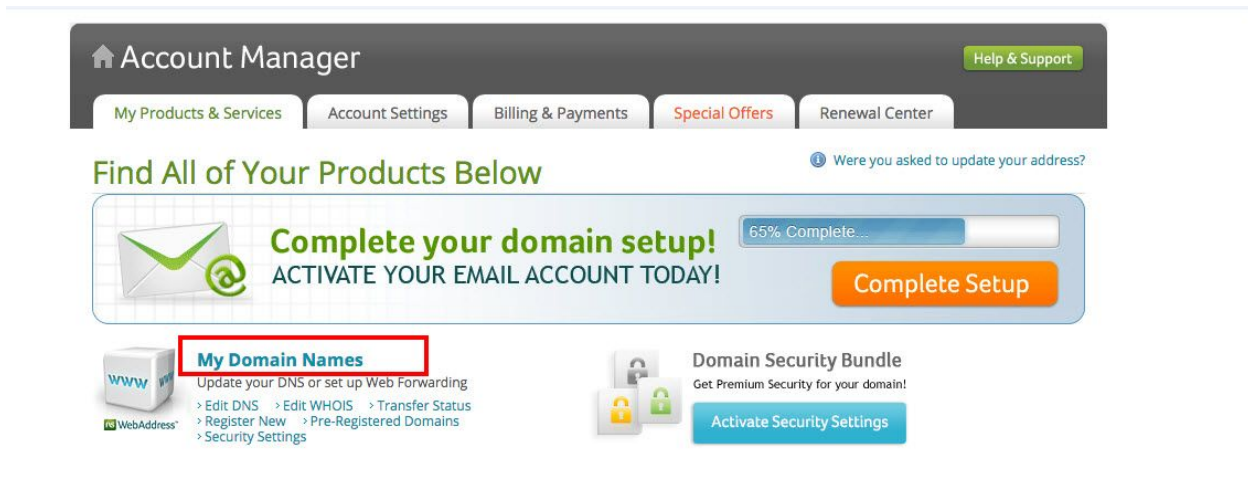

- **Host = '*'**
- **Points To: 18.205.118.100**
- **TTL: 1 Hour:**

Click **Save**.

Keep in mind that it takes most domain registrars **24-48** hours to make these changes.

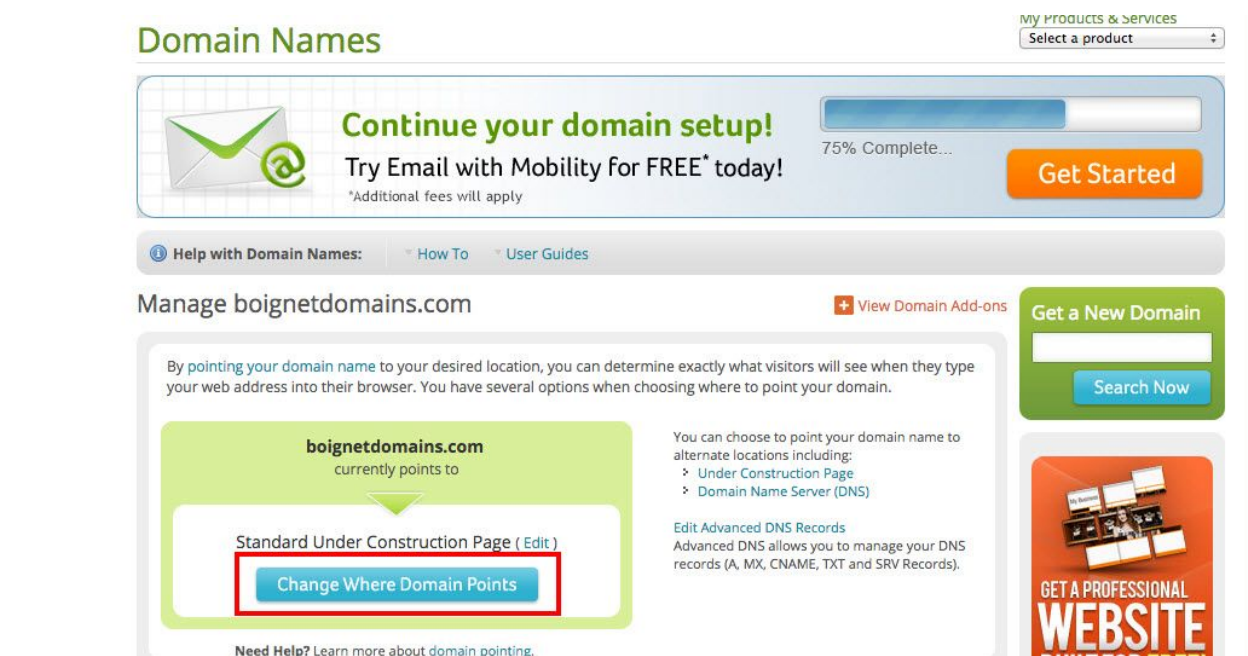

Network Solutions:

After logging into Network Solutions, click on **My Domain Names**:

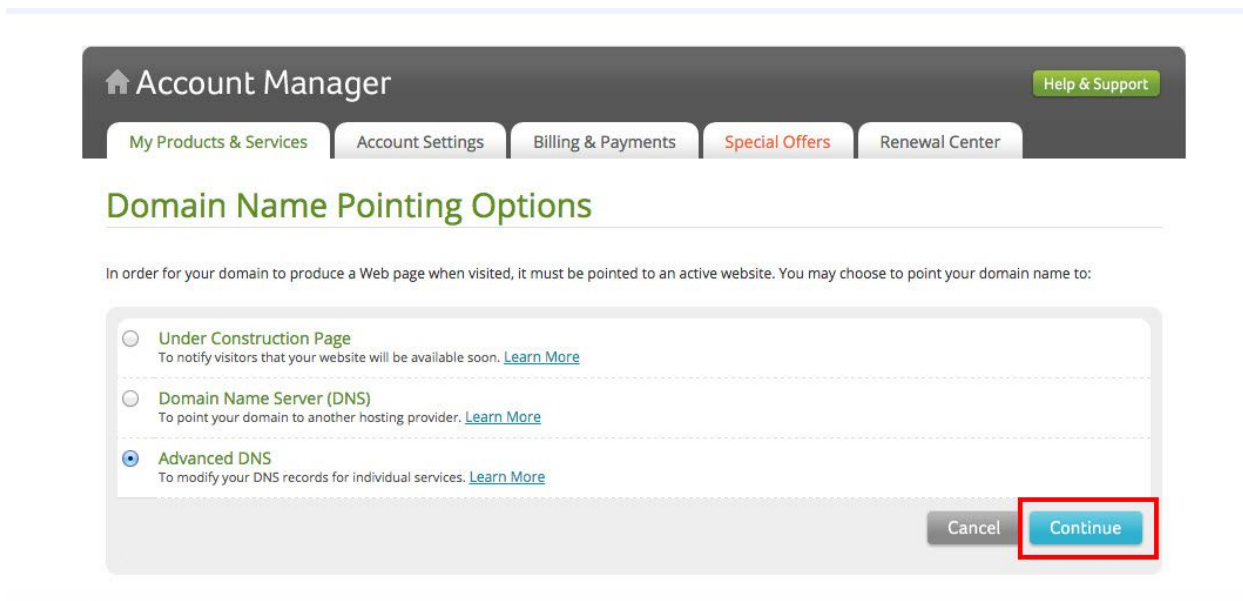

The screenshot shows the Network Solutions Account Manager interface. At the top, there's a navigation bar with links: Account Manager, My Products & Services, Account Settings, Billing & Payments, Special Offers, and Renewal Center. A 'Help & Support' button is also present. Below the navigation bar, a banner reads 'Find All of Your Products Below' with a progress indicator '65% Complete...'. A large green button labeled 'Complete Setup' is visible. Below this, the 'My Domain Names' section is highlighted with a red box. It includes links for 'Update your DNS or set up Web Forwarding', 'Edit DNS', 'Edit WHOIS', 'Transfer Status', 'Register New', 'Pre-Registered Domains', and 'Security Settings'. To the right, the 'Domain Security Bundle' section is visible, with a link to 'Activate Security Settings'.

Next, click on **Change Where Domain Points**:

The screenshot shows the 'Domain Names' page. At the top, there's a navigation bar with links: My Products & Services, Select a product, and a dropdown menu. Below the navigation bar, a banner reads 'Continue your domain setup!' with a progress indicator '75% Complete...'. A large green button labeled 'Get Started' is visible. Below this, the 'Manage boignetdomains.com' section is visible. It includes a link to 'View Domain Add-ons'. The main content area shows a diagram of the domain 'boignetdomains.com' pointing to 'Standard Under Construction Page (Edit)'. A red box highlights the 'Change Where Domain Points' button. To the right, there's a section titled 'You can choose to point your domain name to alternate locations including:' with links for 'Under Construction Page' and 'Domain Name Server (DNS)'. Below this, there's a link to 'Edit Advanced DNS Records' and a description of 'Advanced DNS'. On the right side, there's a 'Get a New Domain' section with a search bar and a 'Search Now' button. At the bottom right, there's a 'GET A PROFESSIONAL WEBSITE' banner.

On the next page, select **Advanced DNS** and click **Continue**:

Update Advanced DNS for boignetdomains.com

Choose this option if you want to use this domain with some Network Solutions services and some non-Network Solutions services. For example, you might continue to use Network Solutions email, but host your website elsewhere. Or, you can keep your Network Solutions website, but use a different provider for email.

Only advanced users should make updates to their Advanced DNS Manager.

Please note: Changes made to these Internet settings may cause you to lose access to your existing email and websites.

IP Address (A Records) ⓘ

Host	TTL	Numeric IP
www	7200	208.91.197.27 Under construction Page
@ (None)	7200	208.91.197.27 Under construction Page
* (All Others)	7200	208.91.197.27 Under construction Page

Frequently Asked Questions

What is Advanced DNS?
Advanced DNS allows you to manage your DNS records (A, MX, CNAME, TXT and SRV Records) for individual services, such as changing IP addresses, or modifying an email delivery address.

Choose this option if you want to use this domain with some Network Solutions® services and some non-Network Solutions services. For example, you might continue to use Network Solutions email, but host your website elsewhere. Or, you can keep your Network Solutions website, but use a different provider for email.

Only advanced users should make updates to their Advanced DNS Manager.

What is an IP Address?
An Internet Protocol (IP) address is a unique number which identifies a computer and its location on the Internet. Your IP address is used to transmit data from a website to your computer.

What is a Mail Server (MX Record)?
MX ("Mail eXchange") records are used to determine the delivery route for your e-mail. For example, if you want to host your own mail server for the domain in your account, you must specify the mail server names as MX records. In addition, you can specify multiple mail servers and rank them by priority to respond in the event the primary mail server is unavailable.

On the next page, find the * Host record and update the Numeric IP address with the following:

18.205.118.100

Do not edit the other A records.

Scroll down to the bottom of the page and click **Continue**.
